

**World TB Day March 24**

# SPEAK OUT ON WORLD TB DAY MARCH 24

## **TB kills...**

1.7 million people around the world every year. (That's equal to the population of Perth.)

## **TB spreads easily...**

Through the air when an infected person coughs, sneezes, laughs or sings.

## **TB is in our neighbourhood....**

Indonesia, Papua New Guinea and Timor Leste have some of the highest burdens of TB in the world.

## **TB can be prevented...**

With faster, more accurate testing. (The test used in most of the world is inaccurate, slow and older than the automobile.)

## **TB can be cured...**

With a course of drugs costing as little as \$20

## **TB funding...**

Comes mostly (60%) from one source (The Global Fund to Fight AIDS, TB and Malaria).
